

- optogenetics, 32, 33, 39, 43, 56, 188
- Packard, Mark, 49, 61–65, 136, 188
- Parkinson's disease, 33, 34, 41, 64, 65
- Pavlovian-instrumental transfer, 52–55, 57, 58, 136
- PKM-zeta, 180, 181
- positron emission tomography, 128–131, 134
- prefrontal cortex, 14, 26, 27, 49, 50, 52, 55, 77, 80, 83, 85–97, 107, 109, 114, 116–118, 132, 136, 143, 153, 160, 170, 189, 190
- putamen, 26, 27, 49, 50, 117
- reconsolidation, 182–185
- reinforcement learning, 13, 37, 38, 52, 67, 68, 70–74, 77–80, 133
- reptilian brain, 23, 24
- response inhibition, 30, 115, 116, 130, 131, 147, 148
- resting fMRI, 191
- resurgence, 46, 47
- reward prediction error, 36–40, 65, 68, 69, 145
- Robbins, Trevor, 116, 130, 131, 147
- Schultz, Wolfram, 36–38, 71
- Shohamy, Daphna, 64, 65
- Smith, Steve, 118
- Squire, Larry, 19–22, 25, 26, 64, 65
- stop-signal task, 115–119, 131, 175
- striatum, 27–31, 34, 35, 41–44, 48–52, 119, 128, 131, 132, 141, 148, 149, 182
- Stroop effect, 5, 56
- substantia nigra, 27, 31, 34
- subthalamic nucleus, 27, 28, 30, 117–119
- synaptic plasticity, 34, 35
- Tourette syndrome, 168
- transcranial magnetic stimulation, 109, 187, 191
- triune brain, 24
- ventral tegmental area, 27, 31, 125
- ventromedial prefrontal cortex, 108
- willpower, 14, 99, 119, 120, 122, 137, 147, 167, 170, 171, 196
